

Has this file been identified as malicious? Explain why or why not.

Yes, this file has been identified as malicious. Nearly all security vendors on VirusTotal flagged this hash as malicious, with the popular threat label identifying it as **trojan.flagpro/fragtor**. Multiple vendors classified it as a Trojan or Backdoor (e.g., "Backdoor:Win32/FlagPro.B", "Trojan.Fragtor"), indicating this file is designed to give an attacker unauthorized remote access rather than directly encrypt files like typical ransomware.
