

Parking lot USB exercise

Contents	Write 2-3 sentences about the types of information found on this device. • <i>The USB drive contains a mix of personal and work files, including family and pet photos, a new hire letter, and an employee shift schedule.</i> • <i>The work files likely contain PII, and the new hire letter may include names, roles, or other sensitive HR data.</i> • <i>Storing personal and work files together on the same device is not safe, since a compromise of one exposes the other.</i>
Attacker mindset	Write 2-3 sentences about how this information could be used against Jorge or the hospital. • <i>The new hire letter and shift schedule reveal internal HR processes and employee names, which could be used to impersonate staff or plan further attacks.</i> • <i>An attacker could use the personal photos to identify Jorge's family members and target them through phishing or social engineering.</i> • <i>Since Jorge works in HR, this access could also open a path into sensitive employee records across the hospital.</i>
Risk analysis	Write 3 or 4 sentences describing technical, operational, or managerial controls that could mitigate these types of attacks: • <i>A USB drive like this could be infected with malware such as keyloggers, ransomware, or trojans that activate once plugged in.</i> • <i>A threat actor could find PII such as employee names, family photos, HR letters, and shift schedules that reveal internal staffing details.</i> • <i>This information could be used to impersonate staff, target employees or their families with phishing, or gain a foothold into the hospital's internal systems.</i>
